

### S Series Photocontrols

S Series electronic photocontrols are designed for HID luminaire operations and utilize a unique light sensor with a spectral response which mirrors the visible light spectrum of the human eye. The S Series photocontrols are not susceptible to operational "drift" caused by harsh environments or by overheating. Extended life is achieved through a non-chatter load break from a low power consumption DC circuit.

### Features

- Meets or exceeds ANSI C136.10
- Proven DC circuit design
- Close 1:1.5 On to Off operating ratio
- Non-chatter load break
- Phototransistor operates with visible light spectrum
- 12 year expected life
- Low power consumption = extended life
- Close ratio reduces burning hours at sunrise
- Significantly reduced energy and maintenance costs
