

Bat Eye Technology

“Available in Long Life and Dimulator Controls”

Sunrise Technologies introduces a proprietary Bat Eye Technology circuit eliminating unintentional operation of LED fixtures. Now available on our full line of long life and dimming twistlock photocontrols.

FEATURES

- Only Reacts to Sunlight
- LED Light Immune
- No False Activation
- Cost Effective
- No Drift
- More Accurate
- Long Life

ADVANTAGES

- No Cycling
- Reduced Service Calls
- Consistent Over Service Life
- No Unwanted Activations
- 20+ Year Service Life Expectancy
- Energy Savings
- Window Can be Pointed in Any Direction

TRS Series

with Bat Eye Technology

20 Year Life Expectancy

Unsurpassed construction, electrical, process, and environmental protections make the TRS Series the highest grade twistlock photocontrol on the market today.

No aspect of design was overlooked, thus eliminating any potential weak point. It is designed to exceed the life expectancy of LED and Induction lights.

Dimulator Series

with Bat Eye Technology

Dim LED Streetlights at Midnight

The Dimulator Series is a long life Twistlock Photocontrol that sends an LED dimming signal through an ANSI C136.41 compliant receptacle at mid-point between a dusk to dawn.

- Early AM full brightness available
- Automatic lumen compensation for fixture aging and environmental buildup
- Consult Factory for custom solutions

ELL Series

with Bat Eye Technology

Extra Long Life Photocontrol

Numerous feature upgrades extends the life expectancy of the already long life twistlock product line. Features exceed those of competitive long life designs. The ELL is an excellent choice when an extended life expectancy is desired. Designed to last longer than the fixture.
